Measuring the bonded area of individual fiber-fiber bonds

L. Kappel, U. Hirn, W. Bauer and R. Schennach

Institute for Paper, Pulp and Fiber Technology
Graz University of Technology

CD-Laboratory for Surface Chemical and Physical Fundamentals of Paper Strength
Imaging of the samples

- The samples are embedded and serially sectioned with a microtome
Image analysis

- Measurement of bonded area together with morphological parameters
  - Fiber wall thickness, fiber cross sectional area, fiber perimeter, fiber width, fiber collapse, crossing angle, degree of bonding
- Influencing factors on size of bonded area
